Alberto Real

Frontend Architect | Angular Lead | Java senior | Full Stack Engineer
Tech Lead

Rubí, Cataluña, España

Extracto

After several years in accounting, I pivoted to software development, a transition that sparked a complete professional and personal revolution. I initially built my foundation in Java and .NET, working on SQL databases and desktop applications, before evolving into a Full Stack role through Angular. Today, I am a Frontend Architect specializing in Angular, leveraging my analytical background to build scalable, high-performance user experiences. While my professional focus is centered on the frontend, I consistently maintain my backend expertise in Java, REST APIs, and microservices to ensure a comprehensive understanding of the development lifecycle. Driven by a passion for continuous innovation, I have recently expanded my expertise into the field of AI development, integrating intelligent solutions into modern software architectures.

Experiencia

LittleBig Connection

Angular Architect & Design System Developer

junio de 2022 - Present (3 años 10 meses)

Barcellona

Development of components and services library based on Angular (until last version 21) to generate the company's design system.
